## CONNECTIONS

## **SEE A DOWNED POWER LINE?** STAY AWAY AND STAY SAFE.

- Immediately call 911.
- Always assume a downed line is energized and dangerous.
- Never touch a downed or dangling wire or anyone or anything in contact with one.
- Stay calm and think before you act. Don't become a victim while trying to help others.

More useful info about electrical safety can be found at www.ladwp.com.

## **Don't Flush Away Your Money-Fix Household Lea**

When it comes to water waste, you may be doing it without even knowing it. Running toilets and leaky faucets may seem minor but are costing you money and precious water: up to 10,000 gallons a year, per household.

You can determine if you have a leak by shutting off all the water indoors and outdoors before checking your water meter. Movement on the leak detection gauge of your water

meter, with all the water shut off, means you have a leak.

Faucet leak? Replace the old faucet washer with a new one.

Toilet leak? Put some food coloring in the toilet tank. If the

coloring seeps into the toilet bowl without flushing, then you have a leak that should be repaired.

Irrigation System leak? A visual check of your irrigation system may let you know if there's a leak. Unusual spikes in your water bill may also indicate a leakage in your irrigation system.

Visit www.ladwp.com/fixaleak to learn more and to watch "How-To" videos on reading your meter, indoor/outdoor water leak checks, and water audits.

## **Reduce Holiday Energy Use and Costs with LEDs!**

Decorating for the holidays doesn't have to be expensive. Upgrade to LED holiday light strings —a lower cost and energy efficient alternative to traditional incandescent light strings.

Light-emitting diodes, or LEDs, have been found to use 90 percent less power and last up to 10 times longer than incandescent lights. LEDs are also cooler, which reduces the risk of fire and personal injury. The LED bulbs are made of plastic, making them highly durable and shock resistant.
