

THE FUTURE OF WATER IN LA

Project Schedule

Fall 2021 - Winter 2026

Region

Arleta

City Trunk Line North - Unit 2

Project Description

As part of its Water Infrastructure Improvement Program, LADWP will replace over 6 miles of an aged pipeline with a new, earthquake resilient pipeline. The extensive replacement project, referred to as City Trunk Line North (CTLN) Unit 1 and Unit 2, will provide additional capacity, greater system flexibility, and enhanced reliability to customers in the San Fernando Valley.

The original Los Angeles City Trunk Line is a 72-inch steel pipeline used to transport large volumes of water throughout the Northeast San Fernando Valley area of Los Angeles. The pipeline was installed in 1914 and has experienced several leaks in the last 16 years.

Construction Information

The Unit 2 project is a 2.2-mile stretch of 54-inch earthquake resilient, welded steel pipe that runs along Arleta Avenue, Branford Street and Canterbury Avenue from Terra Bella Street towards the Tujunga Wash. Crews will mobilize and work on one area at a time, starting with work area 11. Unit 2 is a 5-year project that will continue through Winter 2026. Most of the CTLN project will be installed using open trench construction. Some sections of the pipeline will be installed by micro-tunneling and slip-lining.

Construction Schedule

Monday – Friday, 7:00 AM to 4:30 PM. Some Saturday and extended hours may be necessary.

LADWP will provide advance notice within specific work areas.
