Mid-Valley Water Facility Project

Project Background

LADWP is constructing a new Water System District Yard that will consolidate and provide critical functions in support of Water System operations throughout the San Fernando Valley.

The Mid-Valley facility will replace a combination of outdated buildings and trailers, currently situated at various locations throughout the San Fernando Valley.

The new facility will improve efficiencies across divisions, support the mainline replacement program, and ensure infrastructure resiliency.

Project Description

The project includes approximately 236,000 gross square feet of office, interior storage, and shop space and 180,000 square feet for outdoor material storage.

This multi-purpose, Water System facility project includes an emergency response command center, administration offices, warehouse space, a refueling station, and yard storage for construction materials and equipment. In addition to serving as the new headquarters for Water Distribution, this property will also be home to multiple injection wells that will be utilized to replenish the San Fernando Groundwater Basin with purified water produced from the proposed Advanced Water Purification Facility (AWPF) at the Donald C. Tillman Water Reclamation Plant (DCTWRP).

California Environmental Quality Act (CEQA)

LADWP's Board approved the Mitigated Negative Declaration on February 11, 2020.
