

THE FUTURE OF WATER IN LA

Region

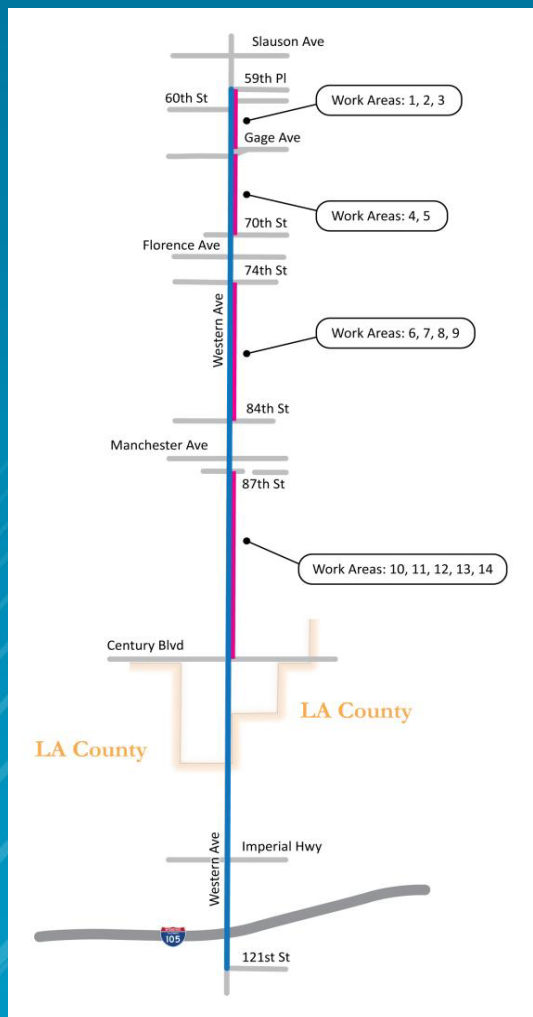

South Los Angeles
Unincorporated Westmont & West Athens

Working Hours:

Monday - Friday
7am - 9pm

Construction Timeline

North of Century: Q2 2026 - Q1 2028
South of Century: Q3 2027 - Q4 2030

Western Trunk Line Project

Project Description

The Western Trunk Line is a large diameter pipeline that provides potable water to city residents in the South Los Angeles and Harbor communities.

As part of the Western Trunk Line Project, LADWP will replace approximately a four mile segment of the existing 31-inch to 36-inch diameter pipeline installed between 1916 and 1947. The pipeline will be replaced with new 36-inch and 54-inch diameter earthquake resistant ductile iron pipe (ERDIP).

Construction Information

Pipeline construction will be divided into small work areas to minimize construction impacts. Each work area will be up to 1,000 feet in length.

North of Century

Start: Summer 2026

Install 2.5 miles of 36-inch ERDIP utilizing approximately fourteen work areas.

South of Century

Start: Summer 2027

Install 1.5 miles of 54-inch ERDIP through approximately eight work areas.

An increase in pipe size will improve flow capacity and operational flexibility, while the ERDIP design will provide greater earthquake resilience.

This project is an essential investment in water infrastructure that will ensure the delivery of reliable, high quality water to the local community.

Mainline connections to the new trunk line will be made to serve water to local homes and businesses with minimal water service interruptions.

Traffic access along Western Avenue will remain available in both directions at all times. Vehicular and pedestrian traffic routes will be delineated around work areas with street striping, signage, and devices to ensure worker and public safety.
